## LEANTEC INTEGRATION WITH CCC ONE

### Securing, tracking, and replenishing materials just got easier

LeanTec's integration with CCC makes it possible for repair assignments that are managed in CCC ONE Repair Workflow to transfer repair order data into LeanTec's Prophet-C software.

This revolutionary inventory management system for the automotive aftermarket allows users to secure, track, and manage their paint and materials. Powered by cloud-based software and utilizing steel stationary cabinets and mobile carts, a shop's inventory can be managed 24/7 from anywhere in the world.

LeanTec provides security and accountability and enables users to create reports and invoices for billable materials, generate automated replenishment orders, decrease waste, and increase profits.

## INTEGRATION BENEFITS

- Improved efficiency: Less rekeying and fewer steps
- More accountability: Technicians can only view and remove products for jobs assigned to them
- Accurate vehicle information: Jobs in Prophet-C mirror the opening/closing of jobs in CCC ONE
- Increased profits: Prophet-C emails the estimator an invoice for billable materials
- Enhanced Analytics: New, automated KPI reports
